DETAILED ACTION

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-5, 13, 15-20, 28, 29-34, 42 and 44 are rejected under 35 U.S.C. 102(b) as being anticipated by Johnson et al (U.S. Patent Number 5,891,030).

3. Regarding claims 1, 16 and 30, Johnson teaches a method for detecting and classifying a shape in a medical image. Specifically Johnson discloses generating a plurality of 2-D sections through a 3-D volume as can be seen in figures 4-6. Further Johnson discloses detecting and estimating features of the shape of the colon (Fig. 5-7c & col. 2, l. 31-33). Johnson generates a shape signature based on the estimated features (Fig. 7a-7c & col. 2, l. 31-40), and then classifies the shape of the colon with the midline approximation (col. 2, l. 31-40).

4. Regarding claims 2, 17 and 31, Johnson discloses the 2-D sections differing from each other in position and orientation (Fig. 5).

5. Regarding claims 3, 18 and 32, Johnson teaches the casual selection of the 2-D sections of interest (col. 3, l. 6-14).

6. Regarding claims 4, 19 and 33, Johnson teaches the plurality of 2-D sections being a plurality of triples of mutually orthogonal planes (Fig. 5), exemplified by the vertical, horizontal and cross sectional views.

7. Regarding claims 5, 20 and 34, see the rejections of claims 3 and 4.

8. Regarding claims 13, 28 and 42, Johnson discloses distinguishing a polyp from a non-polyp (Fig. 5).

9. Regarding claims 15, 29 and 44, Johnson teaches obtaining the medical image through computed tomography colonography (col. 2, l. 15-40).

Art Unit: 2624

10. Claims 1, 6-12, 14, 16, 21-27, 30, 35-31 and 43 are rejected under 35 U.S.C. 102(b) as being anticipated by Hibbard (U.S. Patent Number 6,249,594).

11. Regarding claims 1, 16, and 30, Hibbard discloses detecting and classifying a shape in a medical image. Specifically Hibbard discloses generating a plurality of 2-D sections through a 3-D volume as can be seen in figures 4a-6f. Further Hibbard discloses detecting and estimating features of the (Fig. 1 & 4a-6f). Hibbard generates a shape signature based on the estimated features (col. 6, l. 1-15), and then classifies the shape (Fig. 1-2).

12. Regarding claims 6, 21 and 35, Hibbard discloses a statistically complete description of each feature (col. 8, l. 54-56).

13. Regarding claims 7, 22 and 36, Hibbard discloses the feature estimation comprising fitting one or more lines (Fig. 4a-6f).

14. Regarding claims 8, 23, and 37, Hibbard discloses a statistically complete description of each feature, in each class, which is given by the feature's probability density or histogram (col. 8, l. 54-56).

15. Regarding claims 9, 24, 38, Hibbard discloses using vector quantization in determining the shape (col. 8, l. 59-67).

16. Regarding claims 10, 25, 39, Hibbard does not explicitly state the use of a SVM classifier, but Hibbard does describe the implementation of a SVM classifier (col. 9-22).

17. Regarding claims 11, 26, 40, Hibbard discloses optimizing the classifier with training data (col. 7, l. 11-42).

18. Regarding claims 12, 27, 41, Hibbard discloses using the knowledge of the parametric representation of boundary shapes which reads on, the classified shape being used as training data for the classifier (col. 8, l. 26-27). In addition Hibbard discloses the use of prior shape information (col. 8, l. 20-24).

Regarding claims 14 and 43, Hibbard discloses that before a shape is classified the shape is selected by a pre-detection process by using the boundary contours which match the prior shape information (col. 8, l. 11-24).
